

Project Title

Automated Network Request Management in
ServiceNow

Name: Gonimilli Susmitha

College: Chalapathi Institute of Engineering and Technology

Email: y23cse049@chalapathiengg.ac.in

Project overview :

The **Automated Network Request Management** project is a ServiceNow-based solution designed to simplify and automate the process of submitting, approving, and managing network-related requests. The system allows employees to raise requests such as New Network Connection and Network Relocation through the ServiceNow Service Catalog.

Using **Flow Designer**, the system automatically collects the required request details, sends the request for approval, creates the necessary records and tasks, assigns them to the appropriate team, and sends email notifications. This reduces manual effort, avoids delays, and makes the request process more organized and transparent.

The main goal of the project is to provide a **centralized, user-friendly, and automated system** that improves request tracking, reduces processing time, supports SLA compliance, and helps IT teams efficiently manage network service requests.

Table of Contents:

1. Introduction
2. Project Objectives
3. Key Features
4. ServiceNow Developer Setup
5. Project Implementation in ServiceNow
6. Screenshots of Output
7. Conclusion

1. Introduction:

Modern enterprises rely heavily on robust and efficient network services to support day-to-day business operations. As organizations grow, the demand for network-related requests —such as access provisioning, configuration changes, and connectivity support —also increases. Traditional manual request handling often leads to delays, errors, and limited visibility, impacting both productivity and user satisfaction.

To address these challenges, the Automated Network Request Management in ServiceNow project introduces a streamlined solution that leverages ServiceNow's workflow engine, service catalog, and automation features. By enabling end users to submit requests through a self-service portal and automating approvals, task assignments, and notifications, the system ensures faster, more accurate, transparent request management.

This initiative not only enhances the user experience but also empowers IT teams by reducing repetitive tasks, improving SLA compliance, and allowing focus on strategic, high-value activities.

2. Project Objective:

The main objective of the **Automated Network Request Management** project is to automate and simplify the process of handling network-related service requests using **ServiceNow**. The system aims to provide an easy way for users to submit requests such as **New Network Connection** and **Network Relocation** through the Service Catalog.

The project focuses on reducing manual work by automating **request routing, approval processes, record creation, task assignment, and email notifications** using Flow Designer. It also aims to improve request tracking, reduce processing delays, ensure timely fulfillment, and provide better visibility to both users and IT support teams.

3. Key Features:

- Custom service catalog for common network requests

- Dynamic forms to capture relevant request details
- Automated approval workflows based on request type and sensitivity
- Integration with infrastructure management or orchestration tools (optional)
- Real-time status updates and notifications to requesters and technicians

Reporting and analytics on request volume, resolution time, and SLA adherence

4. ServiceNow Developer Setup:

Create a Developer Account

1. Go to ServiceNow Developer Portal(<https://developer.servicenow.com/dev.do>).
Sign up for a free developer account and fill out the following details.
2. After signing up, you will get a verification mail to your provided email id. After the verification your ServiceNow Developer Portal Home Page will appear.
3. Now click on start building it will take you to the section where you can request a Personal Developer Instance (PDI) or start using App Engine Studio and other tools.
4. Profile Icon (Top Right Corner) → Manage your account, request instances, and check your developer profile.

5. Project Implementation in ServiceNow:

After the instance building is completed, the page will be directed to your creator studio. Creator Studio in ServiceNow provides a guided, no-code environment to build applications quickly. It is especially useful for creating request-based applications by defining forms, setting up tables, and automating workflows.

a. Service Catalog Creation:

i. Creation of Service Catalog

1. Navigate to Application Navigator
2. Click on All >> Search for Service Catalog
3. Under Service Catalog >> Select Maintain Items
4. Click on New
5. Fill in the details >> Name – Network Request
6. Select Catalog >> Service Catalog
7. Select Category >> Network
8. Fill in the Short Description >> Network Request Management
9. Click on Save

The screenshot shows the ServiceNow 'Catalog Item - Network Request' form. The form is titled 'Catalog Item - Network Request' and is in 'Edit' mode. The 'Short description' field contains 'Network request Management'. The 'Description' field is empty. The 'Short description' field is highlighted with a red box.

Open the catalog item just created.

1. Select Variables type as Single, Multi line text, reference, choices etc as per requirement
2. Catalog item – Network Request
3. Order–100, 200, 300, ...
4. Question– provide the variable label
5. Name–provide the variables name (used for scripting)
6. Tooltip– this will appear when cursor overed on the field
7. Example text – this will suggest what we need to enter on the field.
8. Mandatory, read-only – need to configure on demand.
9. Auto populate– need to select dependent variable, apply dot walking to get Selected value.

10. Click on Save or Submit.

Type	Question	Order
Container Start	Service Details	100
Single Line Text	If this is a relocation, Please provide ...	200
Multiple Choice	Is this a New connection or Relocation?	250
Container Start	Location & Devices Type	400
Single Line Text	Please provide address here	410
Multiple Choice	Types of Devices	420
Single Line Text	Provide device details here	430
Container Start	Additional Information	440
Single Line Text	If anything else, please specify	500
Single Line Text	if this is a relocation, Please provide ...	510

iii. Variables Types

1. Is this a new connection or Relocation? >> Choice >> New/ Relocation/None
2. If this is a relocation, please provide your relocated address here >> String
3. Types of devices >> Choice >> Laptop/Mobiles/Others
4. Please provide address here >> String
5. Provide device details here >> String
6. If anything, else please specify >> String

iv. Variable Set Configuration

To enhance form usability:

- Navigate to the Variable Sets (optional).
- Follow the same procedure as we used for Variables Creation, for the variable set as well.
- Apply variable sets to the catalog item.

Variables Types

1. Opened on behalf >> Reference >> Reference to user table
2. Email Id >> Single line text >> Auto populate by Opened on behalf of variable.
3. User name >> Single line text >> Auto populate by Opened on behalf of variable.
4. Phone Number >> Single line text >> Auto populate by Opened on behalf of variable.
5. Proof of Document >> Attachment

servicenow All Favorites History : Variable Set - Requester Information ☆ Application scope: Global Update set: Default (Global)

Variable Set Requester Information Update Delete

Update Delete

(SN Utils) Versions (8)

Variables (5) Catalog UI Policies Catalog Client Scripts Included In (1) Catalog Data Lookup Definitions

phonenumber	Single Line Text	Phone Number	400
proof_of_document	Attachment	Proof of Document	500

1 to 5 of 5

v. Catalog UI Policy Configuration

Scenario: If user selects types of devices is Others, then Please specify field should populate.

Procedure:

1. Navigate to catalog items
2. Open Network Request item
3. In related list, we have Catalog UI policy
4. Click on New button to configure New UI policy
5. Select Applies to as Catalog item
6. Select catalog item as Network Request

7. Provide short description, if required
8. Apply condition >> types of devices is others
9. Click on save, after saving the form will get UI policy actions in the related list
10. Click on New button to configure new UI Policy action, and Select the variable which we want to display on condition
11. Make Visible True as per our requirement
12. Update the UI Policy and Test the same on Catalog form

Variables (10)	Variable Sets (1)	Catalog UI Policies (2)	Catalog Client Scripts	Available For	Not Available For	Categories (1)	Catalogs (1)	Catalog Data Lookup Definitions	Related Articles

1 to 2 of 2									

b. Creation of Table:

i. Creation of Table

Navigate to: System Definition >> Tables.

a. Click New to create a new table.

b. Fill in Table Information:

i. Name: Name of the table_____

ii. Label: Backend name of the table_____

iii. Auto-generate schema: Leave it checked if you'd like ServiceNow

to auto-generate schema fields.

c. Click Submit to create the table.

The screenshot shows the ServiceNow interface for configuring a table. The top navigation bar includes the ServiceNow logo, 'All', 'Favorites', 'History', 'Admin', and a 'Table - Network Database' tab. A blue banner at the top states: 'A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)'. Below this, the configuration fields are visible: '* Label' is 'Network Database', '* Name' is 'u_network_database', 'Application' is 'Global', and 'Remote Table' is empty. Action buttons like 'Delete', 'Update', and 'Delete All Records' are present in the top right.

ii. Creation of Fields

Fields are created at the table level in ServiceNow.

1. Open Application Navigator and search for Tables.
2. Go to System Definition >> Tables.
3. Search for and open the Network Database table.
4. Open the Columns section.
5. Click New to create a new field.
6. Enter the required field details and click Submit.

servicenow All Favorites History Admin Table - Network Database Application scope: Global Update set: Default [Global]						
Table Network Database Table Columns for text Search Delete Update Delete All Records 1 to 16 of 16 New						
Dictionary Entries						
	Column label	Type	Reference	Max length	Default value	Display
	Updated by	String	(empty)	40	40	false
	Updated	Date/Time	(empty)	40	40	false
×	Work Status	String	(empty)	40	40	false
	Created by	String	(empty)	40	40	false
×	Request type	Choice	(empty)	40	40	false
×	Customer Document	String	(empty)	40	40	false
×	Requested For	String	(empty)	40	40	false
×	Customer Address	String	(empty)	40	40	false
	Created	Date/Time	(empty)	40	40	false
×	Assigned to	Reference	User	32	32	false
×	Device Details	String	(empty)	40	40	false
	Sys ID	Sys ID (GUID)	(empty)	32	32	false
	Updates	Integer	(empty)	40	40	false
×	Assignment group	Reference	Group	32	32	false

c. Request Approvals Creation (Related List):

i. Creation of Related List

1. Navigate to System Definition >> Relationships.

2. Click New to create a new relationship.

3. Fill in the following details:

- Name: Approval Request
- Applies to Table: Network Database table.
- Queries from Table: Sysapprovals table.
- Active: Make sure it's set to True.

4. Save the relationship.

The screenshot shows the ServiceNow 'Relationships' page for a table named 'Approval Request'. The page has a dark blue header with the ServiceNow logo and navigation links like 'All', 'Favorites', 'History', and 'Workspaces'. On the right, it indicates 'Application scope: Global' and 'Update set: Default (Global)'. Below the header, there's a sub-header with a back arrow, a menu icon, and the text 'Relationship Approval Request'. To the right of this are buttons for 'Run Query Diagnostics', 'Update', and 'Delete', along with up and down arrows. The main content area has a form with the following fields:

- Name:** A text input field containing 'Approval Request'.
- Advanced:** A checkbox that is currently unchecked.
- Application:** A dropdown menu set to 'Global'.
- Applies to table:** A dropdown menu set to 'Network Database [u_network_da...]'.
- Queries from table:** A dropdown menu set to 'Approval [sysapproval_approver]'.

ii. Adding Related List to the Table

1. Navigate to Form Designer for the table where you want to show related records.
2. Add a Related List widget to the form.
3. Select the Related List you want to show

Query with <> Turn on ECMAScript 2021 (ES12) mode

```

1  (function refineQuery(current, parent) {
2
3      // Add your code here, such as current.addQuery(field, value);
4      current.addQuery('source_table', parent.getTableName());
5      current.addQuery('document_id', parent.sys_id);
6
7  })(current, parent);

```

d. Creation & Implementation of flows, Actions in Flow Designer :

i. Creation of Flow

1. Navigate to Flow designer home page
2. Click on New to create a new flow

3. Provide flow name as Network Request
4. Provide description of flow
5. Click on Build flow.

ii. Configuring Trigger

1. Click on (+) Icon to Configure the Trigger
2. Select Trigger as Application → Service catalog
3. Click on Done.

iii. Configuring Actions

Click on Actions button to configure new action

1. Get Catalog Variables

- Click on Action, search for Get Catalog Variables
- Select Get Catalog Variables
- Action Inputs >> Trigger >> service catalog → Requested Item
- Template catalog items >> Select table >> Network Request
- Select the Required Variables and Move to the selected area.

- Click on done

2. Create Record

- Select action as Create Record
- Select table as Network Database
- Click on Add fields button to configure the fields
- Configure the Required fields as shown in the below picture
- Click on done

2 Create Network DataBase Table Record

Action Properties

Action: Create Record

Action Inputs

* Table: Network DataBase Table [x_195...]

* Fields:

Request Number	Trigger - Service... > ... > Num...
Requested For	1 - Get Catalog Va... > ... > Na...
Work Status	New
Assignment Group	Network
Date of Enquiry	Trigger - Service... > ... > Creat...
Device Details	1 - Get Catal... > types_of_de...
Customer Address	1 - G... > please_provide_addr...

+ Add field value

Delete Cancel Done

3. Ask for approvals

- Select action as Ask for Approval
- Select target record >> Create record >> network database table
- Provide Approval Reason >> Waiting for approval
- Configure approval rules >> Approve, reject, approve/reject
- Select approvals as Anyone approves, everyone approves etc.
- We can select approvals like static/dynamic as shown below
- Click on done

3 Ask For Approval on Requested Item

Action Properties

Action: Ask For Approval

Action Inputs

* Record: Trigger... > Requested Item... X

Table: Requested Item [sc_req_item]

Approval Reason: Waiting for Approval

Approval Field: Approval X

Journal Field: Approval history X

* Rules

Approve When: Anyone approves Network X

Due Date: None

Add another OR rule set

OR AND

Delete Cancel Done

4. Flow Logic

- Select action as flow logic and Select If condition
- Apply condition >> Ask for approvals state is Approved/Rejected as per requirement
- Click on done

4 If

Condition Label: If Request is Approved

* Condition 1: Trigger - Servic... > ... > Appro... X is Approved

or and

Add another condition set(OR)

Delete Cancel Done

5. Send Email

- Select action as Send Email
- Select target record >> Create record >> network database table
- Table will be selected automatically
- Configure To, CC, BCC as per our requirements (select static/dynamic)

- Provide Subject & Body as shown in the below picture
- Click on done

The screenshot shows the 'Send Email' action configuration window. The 'Action' is set to 'Send Email'. Under 'Action Inputs', the 'Target Record' is '2 - Create Record > Network DataBase Table', the 'Table' is 'Network DataBase Table [x_195...', and 'Include Watermark' is checked. The 'To' field is '1 - Get Catalog Via... > Email', the 'CC' is '2 - Create Record > Email', and the 'Subject' is 'Request had been created'. The 'Body' text area contains a pre-formatted email template with placeholders for request details. At the bottom right are 'Delete', 'Cancel', and 'Done' buttons.

6. Update Record

- Select action as Update Record
- Select record as >> create record >> network database
- Table will be selected automatically
- Configure the fields as per requirement, as shown in below
- Click on done

The screenshot shows the 'Update Network DataBase Table Record' action configuration window. The 'Action' is set to 'Update Record'. Under 'Action Inputs', the 'Table' is 'Network DataBase Table [x_195...'. The 'Fields' section shows 'Assigned to' set to 'Abel Tuter' and 'Work Status' set to 'In Progress'. There is an '+ Add field value' button at the bottom of the fields section. At the bottom right are 'Delete', 'Cancel', and 'Done' buttons.

iv. Flow Chart

Network Request Workflow: -

The Network Request workflow automates the complete request process in ServiceNow. When a user submits a request through the Service Catalog, the flow retrieves the submitted details, creates a Network Database record, and sends the request for approval. If the request is approved, an email notification is sent and the Network Database record is updated automatically.

vii. Conclusion

The **Automated Network Request Management** project provides an efficient and centralized solution for managing network-related service requests using

ServiceNow. By using the **Service Catalog, Flow Designer, automated approvals, task assignments, record creation, and email notifications**, the system reduces manual effort and minimizes processing delays.

The solution makes it easier for employees to submit requests such as New Network Connection and Network Relocation, while enabling the IT team to track and manage requests effectively. Overall, the project improves speed, transparency, accuracy, and request management, providing a more organized and reliable network service process.

.

Thank you
